

DRAFT
Guidelines for Credit Based Course on Pedagogical Aspects for Teaching Divyangjans and Specific Learning Disabilities (SLDs)

July, 2022

UNIVERSITY GRANTS COMMISSION
Ministry of Education, Government of India,
NEW DELHI

Guidelines for Credit Based Course on Pedagogical Aspects for Teaching Divyangjans and Specific Learning Disabilities (SLDs)

Chapter 1 Introduction	2-6
Chapter 2 Pedagogy for students with disabilities	7-18
Chapter 3 Disability specific Pedagogical support	19-28
Chapter 4 Accessibility and Pedagogy	29-32
Chapter 5 Pedagogy of Choice Based Credit System (CBCS) and Academic Bank of Credits (ABC) for Students with Disabilities in HEIs	33-35

Guidelines for Credit Based Course on Pedagogical Aspects for Teaching Divyangjans and Specific Learning Disabilities (SLDs)

Chapter 1 Introduction

Educational Status of Persons with Disabilities

National Sample Survey Organization (NSSO) 2011 reported that 2.2% of the population has disability. This data consists of only 7 disabilities as per erstwhile Persons with disabilities act, 1995, of which 2.3% are from rural areas and 2% are from urban areas. The prevalence of disability is also high among males than females, among males it is 2.4% and among females it is 1.9%. Out of 2.2% disabled population only 1.46 crore people are literate, in which males constitute 49% of the population in rural areas and 20% in urban and only 8.5% disabled are literate, comprising 9% males and 7.7% females. According to the survey, only 0.56% of the total students are enrolled in higher education. The data clearly suggests that there is a need to take more specific measures for better inclusion and participation of the disabled in rural areas and need to support and enhance the female literacy rate at all levels of education, especially at the higher education level. So there is a great need for making some Guidelines for Credit Based Course on Pedagogical Aspects for Teaching Divyangjans at Higher Education Institutions (HEIs).

The latest policy document of National Education Policy 2020 (NEP 2020) emphasizes on equity and inclusion in higher education. It also aims at building the overall development of students by strengthening infrastructure including open and distance learning, online education and increasing the use of technology in education particularly in higher education. NEP 2020 putting the provision of Academic Bank of Credit (ABC) which allows students of undergraduate (UG) and post graduate (PG) degree courses with multiple entry and exit in a stipulated time period. The credit on these courses consists of 40 for certificate, 84 for diploma program, 120 for a bachelor's degree program and 160 credits for honors or research degree program.

The Choice Based Credit System (CBCS) provides an opportunity for student irrespective of any diversity including students with disabilities to select courses from the prescribed options, comprising core, elective and skill or foundation-based courses. CBCS aims to redefine the curriculum, keeping pace with the liberalization and Globalization in education to allow students with an easy mode of mobility to various educational institutions with the facility of credit transfer. Evaluation in credit system needs to describe an educational program by attaching credits to its components. In higher education system it may be based on different parameters such as course load, learning outcomes and contact hours for teaching and learning.

CBCS also provides flexibility in opting courses and subjects, skills and capacities for development of productive human beings. With the flexibility in selection of subjects and courses, an Inclusive Pedagogy needs to be promoted at all levels of education for meeting the academic needs of all the students including Socio-economically Disadvantaged Groups (SEDGs) and students with disabilities. It is characterized by the use of multiple modes of delivery, addressing multiple learning styles and learning needs of students from diverse background including students with disabilities. To achieve this, accessible instruction is one of the basic requirements for pedagogical aspects for teaching and learning of students with disabilities. In India continuous efforts are being made through various legislations for making the society inclusive in terms of the education of students with disabilities.

National Curriculum Framework

National Curriculum Framework (NCF)-2005 has emphasized on flexibility in the curriculum to accommodate the diverse categories of students including those with disability in both cognitive and non-cognitive areas. NCF-2005 recommends that the policy of inclusion is to be implemented throughout the educational system ensuring participation of all students. NCF 2005 is directed towards developing inclusive teaching learning process and meaningful experience for students with diverse needs.

United Nations Convention on Rights of Persons with Disabilities (UNCRPD)

The purpose of UNCRPD is to promote, protect and ensure the full and equal enjoyment of human rights and fundamental freedom by all persons with disabilities and to promote respect for their inherent dignity, individual autonomy including the freedom to make one's own choices and independence. It advocates reasonable accommodation for persons with disabilities and demands accessibility in all areas of life, health, education, and infrastructure. It recognizes the rights of persons with disabilities to education. With a view to realize this right without discrimination and on the basis of equal opportunity, it will ensure an inclusive education system at all levels with lifelong learning. It emphasizes full development of human potential, sense of dignity, self-worth, the strengthening of respect for human rights, fundamental freedoms and human diversity. It directed the overall development of persons with disabilities for their personality, talents and creativity, as well as their mental and physical abilities, to their fullest potential by enabling persons with disabilities to participate effectively in a free society.

Persons with disabilities will receive the support required, within the general education system, to facilitate their effective education. Reasonable accommodation of the individual's requirements will be provided. Effective individualized support measures are provided in environments that maximize academic and social development, consistent with the goal of full inclusion. Persons with disabilities learn life skills and social development skills to facilitate their full and equal participation in education. Learning will be facilitated through Braille, alternative script, augmentative and alternative modes, means and formats of communication, orientation and mobility skills, by facilitating peer support and mentoring. Learning of sign language and the promotion of the linguistic identity of the deaf community will be prioritized. It ensures the education of students who are blind, deaf or deaf-blind in the most

Guidelines for Credit Based Course on Pedagogical Aspects for Teaching Divyangjans and Specific Learning Disabilities (SLDs)

appropriate languages, modes and means of communication and in an environment, which maximizes their academic and social development. Persons with disabilities will be able to access general tertiary education, vocational training, adult education and lifelong learning without discrimination on an equal basis with others. To this end, it will ensure reasonable accommodation to persons with disabilities.

National Policies for Persons with Disabilities, 2006

This policy recognizes that persons with disabilities are valuable human resources for the country and seek to create an environment that provides those equal opportunities, protection of their rights and full participation of disabled in society. The focus of the policy includes Prevention of Disabilities, Rehabilitation Measures for women with disabilities issues, barrier free environment, issues of Disability Certificate, Social Security, Promotion of NGO, research and sports recreation & cultural life for disabled people in India.

As per the policy, students with disabilities are the most vulnerable group and need special attention, for that the Government would strive to ensure right to care, protection and security for students with disabilities and to ensure the right to dignity, equality and creating an enabling environment where Persons with Disabilities can exercise their rights, enjoy equal opportunities and full participation in accordance with various statutes. Policy directed to ensure inclusion and effective access to education, health, vocational training along with specialized rehabilitation services to children with disabilities. It also ensures the right to development as well as recognition of special needs and care, and protection of children with severe disabilities.

It directed barrier-free environment to enables persons with disabilities to move about safely and freely, and use the facilities within the built environment. The goal of barrier free design is to provide an environment that supports the independent functioning of individuals so that they can participate without assistance, in everyday activities. Therefore, to the maximum extent possible, buildings / places / transportation systems for public use will be made barrier free.

Rights of Persons with Disabilities (RPwD) Act, 2016

The Rights of Persons with Disabilities (RPwD) Act 2016 defines inclusive education as a system of education wherein students with and without disabilities learn together and the system of teaching and learning is suitably adapted to meet the learning needs of different types of students with disabilities. Twenty-one types of disabilities are specified in RPwD act, 2016. Students with all these types of disabilities should have access for higher education. Higher education system should ensure equity and inclusion for persons with disabilities in all the categories. Among the 21 types of disabilities specified under RPwD Act, 2016, some of the disabilities are visible and some are invisible. The special needs of persons with disabilities are divergent. eg access to classroom may be one of the biggest challenges for persons with loco-motor disabilities but they do not require any modification in pedagogy, whereas modification in pedagogy is required for a person with hearing and visual disabilities.

Guidelines for Credit Based Course on Pedagogical Aspects for Teaching Divyangjans and Specific Learning Disabilities (SLDs)

The section 16 of the RPwD Act 2016 recommends that all education institutions should provide inclusive education to students with disabilities and provide them reasonable accommodation according to the individual requirements, ensure that the education to persons who are blind or deaf or both is imparted in the most appropriate language and modes and means of communication, detect specific learning disabilities in children at the earliest and take suitable pedagogical and other measures to overcome them.

The section 32 of the RPwD Act 2016 creates a mandatory obligation for all government higher educational institutions to reserve at least 5% of seats for “persons with benchmark disabilities”. It also provides an upper age relaxation of five years for admission in institutions of higher education to the persons with benchmark disabilities.

National Education Policy (NEP), 2020

National Education Policy 2020 emphasizes Education for disadvantaged which includes Socio-Economically Disadvantaged Groups (SEDGs) broadly categorized based on gender identities, socio-cultural identities, geographical identities, disabilities (including learning disabilities), and socio-economic conditions. Education is a great leveler and is the best tool for achieving economic and social mobility, inclusion, and equality for becoming a constructive and productive citizen of the country.

NEP, 2020 recommends Quality Universities and Colleges, a New and Forward looking Vision for India’s Higher Education System suggesting increased access, equity, and inclusion through a range of measures, Greater opportunities for outstanding public education, Scholarships by private/philanthropic universities for disadvantaged and underprivileged students, Extensive use of Online education, and Open Distance Learning (ODL) systems, Ensuring all infrastructure and learning materials accessible and available to learners with disabilities. It also emphasized that all communities and educational institutions - schools, colleges, universities, and public libraries to be strengthened and modernized to cater to the needs and interests of all students, including students with disabilities.

National Higher Education Qualifications Framework (NHEQF), 2022

The draft of National Higher Education Qualifications Framework (NHEQF) has great implications for the structure of higher education in India. It is a move towards multidisciplinary university education also offering instruction in Indian languages. It also aims at revamping curriculum, assessment and support for enriched student experiences. Qualifications are formal ‘awards’ such as a certificate, diploma or a degree. Qualifications are awarded by a competent authority such as a college or university in recognition of the attainment by students of the expected learning outcomes on the successful completion of a particular programme of study. They are awarded after an assessment and evaluation of learning levels conducted by a competent body that determines the achievement by students of the expected learning outcomes to a given standards.

Objectives:

Keeping in view, the following are the broad objectives of the guideline for Credit Based Course on Pedagogical Aspects for Teaching Divyangjans:

- To provide an objective guideline for credit based courses to facilitate with suitable physical, psychological, social and specific needs of students with disabilities at higher education.
- To provide flexibility in selection of core, elective and skill based courses to students with disabilities to bring them at par with their peer group.
- To provide guidelines for curriculum transaction in accessible manner and format so that students with disabilities could learn as per their needs and abilities.
- To introduce recent technology and pedagogy for enhancing accessibility of students with disabilities in Higher Education Institutions.
- To provide Guidelines for evaluating students with diverse learning needs at higher educational institutions.

Chapter 2

Pedagogy for students with disabilities

Pedagogy consists of various components for teaching and learning of students with disabilities and specific learning disabilities. Each component is equally important for teaching and learning of students with disabilities. These components are supplementary and complimentary to each other.

a) Learning style

No two students are exactly alike in their learning style. Every student including students with disabilities has their own preferred way of learning which needs to be kept in mind while teaching. Theories of learning have evolved different learning style depending upon the individual interests, environment and abilities. Few theories on learning style concentrate on the sensory pathways while other theories focus on the physical environment. Social interaction also contributes to learning. It is important to realize that the way someone learns is not an indicator of intelligence. Two people of same level of intelligence may prefer learning using two different styles of learning. However, there is no indication that one learning style is better than other. But it is also true that certain teaching methods and modalities facilitate certain learning styles. Therefore, in order to teach students with disabilities in different level of education in general and higher education in particular, it is necessary to understand different learning styles and customize the teaching to meet the needs of all of the students.

Highlighting some of the characteristics of learning styles and focusing on the understanding of individual differences as well as preferences of the student concerned can play an important role in learning. The teacher's choice of lectures, activities, projects, and assignments have a significant impact on the students' success. There are different types of learning style. Teachers have to adapt pedagogy to suit different types of learners in an inclusive set up.

Some of the important learning styles are given below:

Visual Learning style: Those with visual learning style learn by observing and seeing. These learners prefer learning by looking or observing pictures, diagrams, videos and watching demonstrations. Print learners are also one of the categories of visual learning styles.

Auditory Learning style: Those with an auditory learning style learn by sense of hearing. They learn better when something is explained to them by spoken words.

Tactile Learning style: Those with tactile learning style, learn best by touching objects. They benefit from participating in hands-on activities. Tactile learners remember what they did and how they did it; they do not necessarily remember what they saw others do or what they heard.

Guidelines for Credit Based Course on Pedagogical Aspects for Teaching Divyangjans and Specific Learning Disabilities (SLDs)

Kinesthetic learning style: Those with kinesthetic learning style learn by taking an active part in learning activities. Motion is an important aspects of kinesthetic learning style.

b) Learning support

Learning support is an important component of pedagogy. It includes providing opportunities to students with disabilities to complete their learning with reasonable adjustments and additional support. These include the following:

- Availability of a variety of courses.
- Providing opportunities to do work-based learning or apprenticeship.
- Providing reasonable adjustments and additional support
- Providing ‘discrete provision’ to meet individual needs of students and is delivered in a more supported environment. This may include higher number of staff and student ratio than mainstream provision.
- Providing careers counseling and arrangements of placement.
- Providing extra financial support from different agencies- Central and state government- Concessions and facilities, scholarship, etc.
- Providing learning opportunities from home- e-learning and distance learning- when difficult to go to higher education institution.
- Providing residential training facilities

c) Assistive devices support

The assistive devices are one of the basic requirements to support the pedagogical aspect for learning students with disabilities. These assistive devices support mostly depends on the need of the individual as per the types of disability. Therefore, it may be referred as disability need specific assistive devices support for pedagogical aspect of teaching students with disabilities including learning specific learning disabilities. These specific disability needs as listed below in each category of disability provides a generic understanding of diverse needs for various type of students with disabilities as per RPwD Act, 2016 and accordingly support of assistive devices may be provided.

Physical Disability

- Support in motor and/or fine-motor functioning, loco motor and non-locomotors functioning.
- Assistance in sitting, mobility, transfers and ambulation.
- Support to manipulate objects, turn pages, write with a pen or pencil, type on a keyboard, and/or retrieve study material.
- Preferential seating to participate in ongoing activities
- Assistance in the use of infrastructure or ICT.

Acid Attack Survivors

- Support in speech and communication
- Support in hand manipulations.
- Support in visual acuity hence would have additional needs as applicable to vision disabilities

Guidelines for Credit Based Course on Pedagogical Aspects for Teaching Divyangjans and Specific Learning Disabilities (SLDs)

- Preferential seating to participate in ongoing activities
- Assistance in the use of infrastructure or ICT.

Cerebral Palsy

- Assistance with sitting, mobility, transfers, and ambulation.
- Support to manipulate objects, turn pages, write with a pen or pencil, type on a keyboard, and/or retrieve study material.
- Preferential or adapted seating to participate in ongoing activities.
- Support in self-care and daily living skills.
- Specific seating furniture to assist in pain relief and postural control.
- Support in speech and communication.
- Assistance in the use of infrastructure or ICT.

Leprosy Cured Persons

- Support to manipulate objects, turn pages, and write with a pen or pencil, type on a key board. And /or retrieve study materials
- Support to meet the limitations in visual acuity.
- Support to meet the limitations in mobility, speech and communication.
- Preferential seating to participate in ongoing activities
- Assistance in the use of infrastructure or ICT.

Short Stature/Dwarfism

- Support with seating and mobility.
- Support related to associate vision, physical, hearing and speech disabilities.
- Preferential seating to participate in ongoing teaching learning activities
- Assistance in the use of infrastructure or ICT.

Muscular Dystrophy

- Assistance with sitting, mobility, transfers and ambulation.
- Support to overcome the limitations in speech and communication.
- Support to overcome the difficulty in hand manipulations.
- Assistance in the use of infrastructure or ICT.
- Preferential seating to participate in ongoing activities.

Visual Disabilities (Blindness and Low Vision)

- Access information in a variety of ways: braille, audio, enlarged print, digital formats, screen reading software's or other tactile and sensory systems
- Assistance with orientation and mobility.
- Preferential seating to participate in ongoing activities
- Support in concept development.

- Assistance in the use of infrastructure or ICT.

Hearing Disabilities (Deaf and Hard of Hearing)

- Support in speech and communication.
- Assistance in understanding verbal information/directions e.g. difficulty to hear sounds like a class bell, announcements etc.
- Preferential seating to participate in teaching learning activities
- Use of devices such as hearing aids and cochlear implants.
- Assistance in the use of infrastructure or ICT.

Speech & Language Disability

- Support in speech and communication.
- Assistance in the use of infrastructure or ICT.
- Preferential seating to participate in teaching learning activities

Intellectual Disability

- Support in speech, communication and social skills.
- Support in cognitive functioning (decision making, reasoning, problem-solving etc.)
- Assistance with seating and mobility.
- Support in hand manipulations.
- Support to understand information.
- Assistance in the use of infrastructure or ICT.
- Preferential seating to participate in ongoing activities.

Specific Learning Disability

- Support in speech, communication and social skills.
- Support to comprehend, speak, read, write, spell or do mathematical calculations.
- Assistance in understanding verbal and written information.

Autism Spectrum Disorder

- Support in speech, communication and social skills.
- Preferential seating to participate in teaching learning activities.
- Support in cognitive functioning (reasoning, problem-solving, etc.)
- Assistance in the use of infrastructure or ICT.

Mental Illness

- Support in speech, communication and social skills.
- Assistance in academic activities due to difficulties in concentration, memory, distractibility, impulsiveness, irritability, fear, anxiety etc.
- Support in cognitive functioning (reasoning, problemsolving etc.) due to disorders of Thinking, Mood, Perception, Orientation, Memory that grossly impairs judgment, behavior, capacity to recognize reality, or ability to meet ordinary demands of life.
- Preferential seating to participate in teaching learning activities.
- Assistance in the use of infrastructure or ICT.

Chronic Neurological Condition – Multiple Sclerosis

- Support in motor and/or fine-motor functioning, locomotor and non-locomotors functioning.
- Assistance with sitting and mobility.
- Support in hand-functioning to manipulate objects, turn pages, write with a pen or pencil, type on a keyboard, and/or retrieve study material.
- Preferential seating to participate in teaching learning activities
- Assistance in the use of infrastructure or ICT.

Chronic Neurological Condition – Parkinson’s disease

- Support in motor and/or fine-motor functioning, loco motor and non-locomotors functioning.
- Assistance for sitting and mobility.
- Support in hand-functioning to manipulate objects, turn pages, write with a pen or pencil, type on a keyboard, and/or retrieve study material.
- Preferential seating to participate in teaching learning activities
- Assistance in the use of infrastructure or ICT.

Blood Disorder – Sickle Cell Disease

- Support in motor and/or fine-motor functioning.
- Assistance with seating and mobility.
- Support to overcome limitations in visual acuity.
- Support in hand-functioning to manipulate objects, turn pages, write with a pen or pencil, type on a keyboard, and/or retrieve study material.
- Preferential seating to participate in ongoing activities
- Assistance in the use of infrastructure or ICT.

Blood Disorder – Thalassemia

- Support in motor and/or fine-motor functioning.
- Preferential seating to participate in ongoing activities
- Assistance in the use of infrastructure or ICT.

Blood Disorder – Haemophilia

- Support in motor and/or fine-motor functioning.
- Preferential seating to participate in teaching learning activities
- Assistance in the use of infrastructure or ICT.

Multiple Disabilities

- Support in speech, communication and social skills.
- Support in cognitive functioning (reasoning, problemsolving etc.)
- Specific seating to assist in pain relief and postural control.
- Assistance with seating and mobility.
- Support in motor and/or fine-motor functioning, loco motor and non-locomotors functioning.
- Assistance in sitting, mobility, transfers and ambulation.
- Support to understand information.
- Assistance in the use of infrastructure or ICT.
- Preferential seating to participate in teaching learning activities.

d) Curriculum design and development

Pedagogical aspects are very much related to curriculum design and development. Therefore while designing and developing programmes / courses, it must consider the support provisions in curricular aspects as given below.

- Curriculum flexibility with a choice of subjects (both theory & practical).
- Planning for reduced course load, subject waiver, or subject substitutions.
- Offering plus-curriculum or expanded-core curriculum subjects.
- Flexibility in course schedules and academic calendar.
- Flexibility in the pace of the course content to allow for multiple speeds for learners.
- Flexibility in attendance requirements.
- Specify overall learning goals and specific learning objectives relevant to each diversity.
- Ensuring learning objectives cover cognitive, affective and psycho-motor domains.
- Offering multiple means of instruction to address a range of learning styles.
- Suggesting multiple options for students to demonstrate learning (e.g. assignments that are writing-based, problem-based etc.)
- Offering a variety of pedagogical choices in each discipline for diverse learning styles and functional needs (e.g. lecture, team-based learning, problem-based learning, Socratic Method, simulations, role-play, debate, service-learning etc.)

Guidelines for Credit Based Course on Pedagogical Aspects for Teaching Divyangjans and Specific Learning Disabilities (SLDs)

- Developing clear rubrics and grading criteria.
- Flexibility in good quality assessment and evaluation methods.
- Availability of syllabus in various accessible formats as per the need of the student
- (Digital copy, hard-copy, braille, large-print, images with verbal descriptions, appropriate color scheme etc.)
- Include a list of reference material, reading material and textbooks that are available in accessible formats (e.g. visual media with subtitles, digital material compatible with screen readers etc.)
- Include a clear statement of how it addresses issues of diversity, inclusion and overall engagement.
- Developing a checklist for resources or accommodations that students may need to maximize their learning (both offline and online classroom).

e) Accessibility and flexibility support

For each category of disability, accessibility support includes measures for

- Offering course waivers or substitutions or option of reduced course load.
- Creating a universally accessible environment at campus & its various facilities ranging from administrative to academic, mobility to residential facilities.
- Flexibility with attendance, timetable/schedule etc.
- Allowing the use of assistive aids and technology.
- Providing conveniently located parking.
- Providing an opportunity to reschedule classes to an accessible location.
- Allowing service animals in facilities.
- Providing priority registration facility.
- Providing advance notice of class schedule and/or room changes.
- Familiarizing the student with the layout of the campus, classroom, laboratory & all Facilities noting the closest exits and locating emergency equipment etc.
- Facilitating raised line campus maps and tactile models of graphic materials.
- Offering advance notice of class schedule and/or room changes.
- Releasing results and documents in accessible formats like large-print, braille, a digital format supported by technology etc.
- Providing assistive lab equipment eg. talking calculators, light probes, tactile timers etc.
- Releasing results and documents in accessible formats like large-print, braille, a digital format supported by technology etc.
- Ensuring accessible websites, social media, online materials/tools with WCAG compliance.
- Establishing diversity-friendly communication benchmarks.
- Safety, privacy and confidentiality measures.
- Assigning teaching assistants.
- Measures to showcase access, enrolment, retention, participation and achievement.
- Formation of alliance clubs etc.

Specific considerations for Visual Disabilities (Blindness & Low-Vision)

- Providing academic support through Plus-Curricular (Expanded Core-Curriculum) Activities
 - Braille Reading & Braille Writing
 - Orientation & Mobility
 - Independent Living Skills
 - Sensory Training –Efficiency skills to use hearing/touch/smell/taste, optical devices.
 - Use of mathematical devices such as Taylor’s Frame & Abacus
 - Compensational skills are necessary for accessing core curriculum like concept development, organization & study skills, tactile graphics, audio material etc.
 - Social Interaction Skills
 - Recreation and Leisure Skills
 - Career Education
 - Assistive Technology
 - Self Determination skills like choice-making, decision-making, problem-solving, personal advocacy, goal setting, conflict resolution etc.

Specific considerations for Hearing Disabilities (Deaf & Hard of Hearing) & Speech and Language Disability

- Making sign language interpreters available.
- Providing visual alternatives for sound-based information like class-bell or verbal announcements.
- Providing academic support through Plus-Curricular (Expanded Core-Curriculum) activities:
 - Audiological intervention
 - Career Education
 - Communication (Oral/Auditory-Oral; Verbal Uni-Sensory; Sign Language; Total communication)
 - Functional Skills like study and organization, concept development, cultural awareness etc.
 - Self-Determination and Advocacy
 - Social-Emotional Skills
 - Using interpreters and translators

Specific considerations for Intellectual Disability, Specific Learning Disability, Autism Spectrum Disorder, Mental Illness, Multiple Disability and High-Support Needs:

- Providing Transition support from school-to-college or graduation-to-post graduation etc
- Providing Scaffolding or step-by-step guidelines of each administrative aspect.
- Offering highly structured instructions or demonstrations to be presented in more than one way.

Guidelines for Credit Based Course on Pedagogical Aspects for Teaching Divyangjans and Specific Learning Disabilities (SLDs)

- Providing academic support through Plus-Curricular (Expanded Core-Curriculum) activities, such as
 - Social Interaction Skills
 - Recreation and Leisure Skills
 - Career Education
 - Self Determination skills like choice-making, decision-making, problem-solving, personal advocacy, goal setting, conflict resolution etc.

f) Teaching and Learning support

Provision of support at all processed linked to learning and skill development includes:

- Student Enrolment and Profile
- Catering to Student Diversity
- Teaching-Learning Process
- Teacher Profile and Quality
- Evaluation Process and Reforms
- Student Performance and Learning Outcomes
- Student Satisfaction Survey
- Getting along with the Theory curriculum
- Getting along with Practical curriculum
- Availability of Accessible Learning Resources
- Assignments, Projects & Course Works
- Participating in learning programs of other Departments
- Participating in Campus Life Activities
- Participating in Competitions and Events
- Participating in Excursions and Tours
- Considerations during Holidays
- Library & Reading resources
- Digital accessibility

Examples of support for Physical Disability

- Use of note-takers and assistive technology
- Provide digital copies of the text (along with a complete list of accessible reference documents)
- Ensuring all off-desk activities are physically accessible or provide alternate assignment options.
- Including the students while forming study/ work groups.
- Giving extra time for assignments/presentations
- Modification in seating.
- Permission to audio/video record lectures
- Permission to briefly leave or move about during class
- Giving multiple options to demonstrate learning (e.g. assignments that are writing-based, problem-based etc.)

Examples of support for Visual Disabilities (Blindness & Low-Vision)

- Allowing the student to determine the ideal sitting location to see, hear and if possible, touch the presented material.
- Assisting the student in labeling lab materials so that they are easily identifiable.
- Verbal description of class activity, such as when a show of hands is requested, stating how many hands were raised.
- Voice recorders, computers, slates, styluses for note-taking

Examples of support for Hearing Disabilities (Deaf & Hard of Hearing)

- Seating which allows a clear view of the instructor, interpreter and the board.
- Visual aids whenever possible, including captioned videos
- Access to word-processor, use of an interpreter for directions.
- Supplement with written instructions, assignments and directions.
- Providing unfamiliar vocabulary in written form, on the board, or in the handout.

Examples of support for Speech & Language Disability

- Permit time to speak without unsolicited aid in filling the gaps in their speech.
- Modification in assignments such as a one-to-one presentation or use of the computer with voice synthesizers.
- Alternative assignments for an oral class report
- Use of assistive devices and alternative communication methods

Examples of support for Intellectual Disability, Specific Learning Disability & Autism Spectrum Disorder

- Allow students to focus on parts of a topic /project; rather than the entire concept.
- Word processor with spell-check and/or voice output to provide auditory feedback
- Transition support during time-table
- Allow for choice in assignments
- Provide breaks during classes (if needed)

Examples of support for Mental Illness

- Preferential seating arrangement (near to door or at the back of classroom etc)
- Assistance with time-management and study skills
- Pre-arranged or frequent breaks
- Personal and private feedback

Examples of support for Chronic Neurological Conditions and Blood Disorders

- Allow frequent breaks to go to drink water, washroom, medical room/take medicine during class.
- Allow occasional rest from curricular activities.
- Providing recorded lectures/course material
- Extreme care for hygiene and cleanliness

Examples of support for Multiple Disability and High Support Needs

- Scaffolding or step-by-step guidelines for each task/activity.
- Assistance in performing classroom and personal care activities.
- Support in classroom mobility and communication
- Sensitivity for challenges in concentration, distractibility, time management, cognitive abilities, social skills etc.

Examples of support for Gender needs and Transgender Persons with Disability

- Gender friendly classroom environment and transactions
- Develop positive self-concept and self-esteem among students.

g) Assessment, Examination and Evaluation

Provision of specific need support at all academic procedures pertaining to continuous assessment and examination is given below:

- Preparation for examinations
- Availing additional coaching & training for competitive examinations
- Continuous Support for examination and evaluation
- Appearing examinations;
- Evaluation and access to results & related procedures of re-evaluation, re-totaling etc.

Examples of support for of Physical Disability

- Alternate test formats such as use of readers, written exams etc.
- Use of scribe or speech-to-text software to record answers to an exam
- Extended time for examination
- Alternate test locations
- Use of computers/ aids/ devices during exams etc.

Examples of support for Visual Disabilities (Blindness & Low-Vision)

- Extra time for examination.
- Provision of braille/large-print question paper or alternate test formats such as audio, use of readers etc.
- Use of computer or assistive technology

Examples of support for Hearing Disabilities (Deaf & Hard of Hearing) and Speech & Language Disability

- Substitute oral exams/ viva etc with written or any other alternative modality.
- Providing an alternate non-verbal way for exam announcements.
- Allow use of hearing aids, cochlear implants and communication devices.
- Extra time for examination as per guidelines issued by D/o EPwD.

Examples of support for Intellectual Disability, Specific Learning Disability & Autism Spectrum Disorder, Multiple Disability and High Support Needs

- Alternate modalities for examination and evaluation; or alternate/adapted question papers
- Quiet, distraction-free examination area
- Breaks during examination
- Exam given by page or by section
- Scaffolding or step-by-step guidelines for examination.

Examples of support for Mental Illness

- On-demand examinations
- Extended time for exams or breaks during exams.
- Quiet, distraction-free examination area
- Exams given by page or by section

Examples of support for Chronic Neurological Conditions and Blood Disorders

- Extended time for exams
- Use of scribes
- Exam modifications e.g. shorter exam duration, on-demand exams etc.
- Allow breaks during exams for washroom, taking medication, moving around etc

Chapter 3

Disability specific Pedagogical support

The support in pedagogical aspects in higher education varies to a certain extent with categories of disabilities. Teacher may consider for disability specific pedagogical aspects as per the below guidelines.

Visual Disability (Blindness and Low Vision)

Curriculum Adaptation: Curriculum adaptation is an ongoing process. For Students with visual disability, the curriculum should be flexible to modify from time to time, and design according to the student's interest and needs. The content, language and teaching method may be adapted through duplication, modification, substitution or omission as per the need of students with visual disability. The content should be flexible and accessible and textbooks should be recorded for people with visual disability. In addition, teachers are required to teach different subjects that are Science, Social Science, Mathematics and Languages using innovative methods, techniques and teaching learning material to students with visual disability.

- **Teaching Science:** It includes development of scientific attitude applying innovative skills for teaching Science, developing competencies for organizing and facilitating laboratory working and designing people centered strategies for evaluating learners achievement in Science using a number of scientific approaches like constructivist approach, direct experiences, inductive and deductive approach, direct experience approach, concept mapping, computer assisted learning, programmed instructions, cooperative teaching and differentiated approach.
- **Teaching Mathematics:** It includes development of scientific attitude applying innovative skills for teaching Mathematics, developing and designing various evaluative methods for math learning, understanding and applying various strategies for learning mathematics including Concept Attainment Model, concept Formation, analytic and synthetic problem solving model, Drill-Work, Brain storming and Computer Assistive Instruction, Situational contextual learning and activity based learning.
- **Teaching Social Science:** It includes developing competencies knowledge and understanding events and phenomena in the society through a number of approaches and pedagogy of teaching Social Science like programmed learning, concept mapping, adapted tactile maps, diagrams and globe, Field Trip, Dramatization, Narration, Explanation, Storytelling, role play, Tactile map reading, developing reading and writing skills for low vision.
- **Teaching Language:** It includes developing competencies for reading and writing required for all languages using approaches like task-based approach, eclectic approach, and constructivist approaches. Also, communicative language teaching, developing language proficiency, inter-personal communication skills, cognitive

academic language proficiency etc are important various methods for learning Prose, Poetry, Drama, Grammar and vocabulary including translation method, structural method, situational method and direct method.

Expanded Core Curriculum:

Assistive Technology: Assistive technology which includes assistive and adaptive tools as well as instructional services. It enhances communication, access, and learning. It can include electronic equipment such as switches, mobile devices, and portable note-takers; computer access such as magnification software, screen readers, and keyboarding; and low-tech devices such as an abacus, a Braille.

Career Education: It provides students with visual disabilities of all ages the opportunity to learn through hands-on experiences. They also learn work-related skills such as assuming responsibility, punctuality, and staying on task. Career education provides opportunities for students with visual impairments to explore and discover strengths and interests and plan for transition to adult life.

Compensatory Skills: Compensatory skills include skills necessary for accessing the core curriculum including concept development; communication modes; organization and study skills; access to print materials; and the use of Braille / Nemeth, tactile graphics, object and/or tactile symbols, and audio materials.

Orientation and Mobility (O & M): O & M instruction enables students of all ages and motor abilities to be oriented to their surroundings and to move as independently and safely as possible. Students learn about themselves and their environments, including home, school, and community. Travel in the community, and use of public transportation, having O & M skills enables students to acquire independence.

Recreation and Leisure: Recreation and leisure skills provide opportunities to explore, experience, and choose physical and leisure-time activities, both organized and individual. Some instructions and provisions should be available at HEIs on the development of life-long skills which may include art, craft, gyms, games & sports, yoga and other enlighten activities at university / collage campus.

Classroom Transaction / role of teacher:

- a) Peer to peer collaborative learning:
- b) Hands on-Activity based learning:
- c) Multi level teaching:
- d) Experiential learning:
- e) Encouraging children to participate in classroom activities:
- f) Different teaching strategies used in the classroom:
- g) Inquiry based learning:
- h) Problem solving:

Hearing disability (Deaf and hard of Hearing)

Communication is the major challenge in classroom for students with hearing impairment. Hearing impairment can be broadly classified as Deaf and Hard of Hearing. A Deaf person cannot hear anything while a person who is hard of hearing has some residual hearing. The severity of hearing loss in a person can vary from mild to profound. Hearing loss can also be congenital, present since birth or acquired later in life. With the advancement in technology, it is possible to rehabilitate. Rehabilitation options are available for all persons with hearing loss irrespective of the severity, type and age of acquisition of hearing loss. A majority of persons with hearing disabilities are rehabilitated with the help of hearing devices. Most commonly recommended hearing devices are hearing aids or cochlear implants. The benefit from the hearing device will be affected by many factors including type and severity of hearing loss, age of acquisition of hearing loss, age at which the student started using hearing devices and the type of hearing devices used by the student, therapy attended with the hearing devices.

The adaptations required while teaching students with hearing disabilities will depend on the hearing ability of students with the devices and their speech language abilities. For students who have hearing loss since birth or early childhood, the communication mode used will depend on the rehabilitation program attended by them. A student can be a Sign Language user or verbal. A verbal student will use spoken language for communication but depending on the benefit from hearing devices, he may be a visual learner, auditory learner or may depend on both audition and vision for learning. So, the adaptation required in pedagogy will vary accordingly. A universal design of learning that minimizes barriers and maximizes learning should be used. A student-centred approach should be used to minimize barriers and maximize learning.

Following are some of the recommendations to be made in pedagogy while teaching students with hearing impairment:

- Repetition: Repetition will help students with hearing impairment in understanding what he missed during the first presentation
- Rephrase: A student with hearing impairment may not hear some of the sounds/words. So, rephrasing using a different word can help such students in understanding what they missed during first presentation
- Articulate/pronounce clearly: Speaking slowly with clear pronunciation/articulation will facilitate understanding for students with hearing impairment.
- Avoid speaking while facing background: Many students with hearing impairment depend on speech reading and visual clues to understand what is spoken.
- Provide visual clues: Face the students with adequate light on face while giving a lecture. Use facial expressions, gestures and body language to convey message. Let the teaching be animated, wherever possible.
- Provide written material to supplement teaching: Providing written resource material will help them in understanding the concepts they could not understand due to their hearing problem
-

Guidelines for Credit Based Course on Pedagogical Aspects for Teaching Divyangjans and Specific Learning Disabilities (SLDs)

- Provide recorded lectures or allow students to record lecture: Students can be given audio/video recorded lectures so that they can replay to understand the concepts they could not hear clearly. Alternatively, students can be given permission to record the lecture while attending the class.
- Use visual aids: While visual aids help all students in learning and remembering, it is an added advantage for students with hearing impairment. So use visual aids wherever possible.
- Write down phrases: Key phrases, new phrases and difficult phrases should be written on the board so that students can understand better.
- Use Multimodal way of teaching: Use power point presentations/slide show/ or videos while teaching
- Use of close captioning for videos: Use videos with close captioning to supplement the information heard
- Use interactive white boards: Use interactive white boards wherever possible as it will help the students in replaying the lecture to understand the concepts
- Introduce terminology prior to teaching a new topic: Students with hearing impairment may have limited vocabulary. So, the new terms should be introduced before the initiation of each topic.
- Provide a reading list well before starting a new topic: The topic of lecture should be announced earlier and a reading list should be provided so that students can come prepared for the lecture.
- Use many activities for teaching each concept
- Control discussions to ensure that only one person speaks at a time
- Have sign language interpreters
- Have a counselling cell
- Have a resource room
- Have remedial classes
- Orient teaching and non teaching staff regarding the needs of students with hearing impairment
- Language exemption may be considered

Other tips for helps students with hearing impairment include the following:

- Preferential seating – facing the teacher/speaker, away from background noise,
- Use of microphone while teaching
- Use of amplification systems in classroom
- Use of FM device
- Reducing background noise
- Assigning peer partner, buddy system

Intellectual Disability

While planning for teaching learning of students with intellectual disabilities, teacher must take their common characteristics in consideration which are described below:

The students with intellectual disabilities have below average intelligence. Therefore, they have limited/below average ability to understand. The extent of intellectual disability varying in degrees impacts learning of the student accordingly. They have limited memory so the experiential learning is better retained than teaching by lecture methods. They need repeated instruction for understanding the simple things. They have difficulty in understanding cause–effect relationship. It means they act without knowing the consequences. They are slow in understanding and executing instructions, more so with multiple instructions. They take more time to learn and respond, require more reaction time. Whatever they are able to learn, they learn better when a concept is taught with concrete examples before moving to abstractions. They have difficulty in generalisation of a concept. They are not able to apply a concept learnt in one environment to another environment. The learning ability is below their age-based class level due to the limited cognitive ability. There is mismatch of chronological age of student with intellectual disability to other students in the classroom. They can have difficulty in problem solving, understanding cues, need clear instruction. Their attention span is limited, so they get distracted easily.

Students with intellectual disability may have poor gross and fine motor ability and poor eye hand coordination. Depending upon degree of intellectual capacity, students with intellectual disability have varying degree of speech and language disorders. They may have mild delay of speech and language development to no speech and language development at all. They may have difficulty in expressing themselves fluently, by aligning their thought process to speech; may grope for words while talking, and need time to express themselves. Some may have additional disabilities such as cerebral palsy, autism, and neurological conditions such as epilepsy.

Not every lecturer or teacher is aware that students with intellectual disability may study through inclusion in higher education. They are not aware about the consequences of intellectual disability and the support students with a disability need in practice. Therefore following strategy must be adopted by the higher education institution.

- A good start is already half a victory.
- As per the understanding level of the student, admission should be given in a suitable course. Admission for a course may be given as per his/her mental age and not as per chronological age.
- We should work on creating employment opportunities for students with intellectual disabilities and making the labour market more accessible.
- The students with intellectual disability might not access the postsecondary education system in a typical manner. They require alternative diploma with significant planning and a strong system of educational supports keeping in view of employment opportunities.
- It is established from the studies that participating in workshops leads to better results and creates attitudes reading books and other sources of information. Course should be selected based on direct activities and practical oriented. It may be alternative equivalent diploma course. The course should be developed in such a way that it is accessible for students with intellectual disabilities and it makes it possible for them to attend higher education.

- Teaching should be in simple language.
- Teacher should speak slowly and involve parents to carry out classroom teaching at home and natural environment.
- Lessons must be simplified and move from concrete to abstract.
- Note takers may be provided to the students in case of writing problem due to poor fine motor coordination.
- Adequate time should be given to reply.
- Apply combination of the strategies as per additional disabilities.
- We can make arrangement of mentoring and coaching fellow students.
- Teachers should be provided necessary skills and knowledge about students with intellectual disabilities.
- Higher education teachers may be provided the necessary information, knowledge and skills regarding students with intellectual disabilities so that they can modify their teaching and learning materials to the specific needs of the students.
- A specific training programme for higher education teachers may be developed and conducted.
- For poor motor coordination, students may require suitable customised aid and AAC for communication between students and faculty. If required encourage the use of augmentative and alternative communication system.
- An inclusive learning environment can be built so that positive attitudes towards students with intellectual disability can be created.
- Repeated instruction with multi-sensory approach should be applied to teach a concept.
- Oral instructions to be given at the time of the examination apart from writing on the boards and repeat clearly after calling for the attention of the students.

Autism Spectrum Disorder

Autism Spectrum Disorder is a neuro-developmental condition typically appearing in the first three years of life that significantly affects a person's ability to communicate, understand relationships and relate to others, and is frequently associated with unusual or stereotypical rituals or behaviors. The challenges on pedagogical aspects of teaching students with Autism Spectrum Disorder includes

- **Attention problem:** Students with autism spectrum disorder are hyperactive or inattentive. Due to poor eye contact, they do not like to watch the face of their teachers and other class fellows in the classroom. They have also problem in joint attention, so they do not like to participate in group activities.
- **Communication problem:** They have problem in speech, language and communication. They have difficulty in communication with their teachers and class fellows. They have problem in following instructions given by teachers and understanding the views of others. Their speech output is limited or there is no speech at all. Even though they speak, they repeat what they hear from teachers and other class fellows. They have an unusual prosody of their speech. Even they restrict their

body language, gestures and facial expressions to express themselves. Sometimes one-sided conversation about a favourite subject that others are not interested in is seen.

- **Socialization problem:** Most of the autistic students have problem in socialization resulting into restriction in participation of group activities like participating in sports events. They may not like to mix with other students, inside and outside the classrooms. They do not build relationship easily with people older or younger to them. There is limitation in social conversation and sharing experiences with others.
- **Behavior problem:** They have specific and restricted interest in objects and activities. They show repetitive activities such as particular body movements, rotating or spinning objects, playing with objects only in one particular way, talking about specific topics, asking the same questions again and again. They like to watch television, radio, computer and Internet but with their own likes and dislikes. They are good at following rules and routines.
- **Emotion and interest:** They have difficulty to express their emotions as well as understanding emotions of others. They either have interest or avoid specific sounds, smells, tastes, or textures. So, they may find some light, sounds, textures, touch deeply distressful, or may seek certain visual, tactile, oral or audio stimulation. They seem to get upset easily, for no apparent reason or by slight changes in routine. They may have focused and intense interests that may seem unusual and information on a specific topic like pre-history, automobiles, space, cricket, etc.
- **Language difficulty:** Even though they have understanding of language, they have difficulty in understanding abstractions and limited imagination capacity. Their semantic, syntactic and pragmatic aspects of language are affected.
- **Academic:** Due to poor hand-eye and motor coordination, they have difficulty in writing by hand and copying from the blackboard. They may be good at some skills such as music, science or math, and yet struggle with things that seem obvious, simple, or easy.

While planning for teaching students with autism spectrum disorders, following pedagogical aspects must be taken into consideration.

- Lessons must be simplified and move from concrete to abstract Use of concrete language in explaining concepts especially in the beginning is advised and use of abstract terms should be avoided.
- Flexibility to pick particular teachers and timing should be allowed as per their likes.
- Course should be framed based on needs and interest of the student with autism spectrum disorder. Student centric designing of degree should be preferred.
- Choice of choosing different subject combinations in normal and skill or vocational courses may be given.
- It should be open to study through any mode – regular, distance, online and virtual modes.
- Learning and examination on demand when student is ready may be provisioned.

Guidelines for Credit Based Course on Pedagogical Aspects for Teaching Divyangjans and Specific Learning Disabilities (SLDs)

- Use of augmentative and alternative communication may be allowed.
- There should be flexibility to study or change in any national or international institutions.
- There should be flexibility to convert credits into degrees and diplomas.
- Provision to lifelong learning process may be done. The notion of a fixed time for education may be removed away with option of multiple entry and exit points.
- Extra time and assistance to meet their academic targets may be provided.
- Open book examination, Group examinations even for conventional theory papers, Spoken / Speaking examinations and on demand examinations may be considered.

Multiple Disabilities

The Challenges, Characteristics and Behaviors of students with multiple disabilities includes the following.

They have a combination of two or more disabilities. Hence, the learning characteristic is specific to the student based on the combination of disabilities. Need assistive devices (low tech/mid tech/high-tech) for their personal and daily living activities. May use wheelchair and adapted seats in class. May have low vision aids or if blind, tactile aids. May be a hearing aid user and also be using assistive devices for speech/communication. Prefer communicate only with their head movements and express their needs only through eye movements. May forget the task learnt easily and may need repeated learning opportunities over a period of time. Perform their regular activities with support of a person. Good at studies but can have associated conditions and physical deformity. Students with deaf blindness may depend on total tactile learning or may use suitable assistive device or technology to optimally utilize their residual vision/hearing optimally.

While planning for pedagogical aspects such as teaching learning, the following points must be taken into consideration.

- Simplified lessons from concrete to abstract with ample examples should be done.
- Step by step instructions with gradual fading of support as the student learns may be done.
- Audio visual and tactile experiences to learn and respond may be done.
- Frequent checks for memory of learnt concepts should be taken care of.
- There should be provision for responding to/participating in class discussion using alternate modes other than speech/writing.
- Enlarged screen display, screen contrast display, screen reader and touch screen facilities may be arranged if required.
- Sensor access program to display in the monitor to access the content for learning may be arranged.
- Model, animation and video having the features of Multisensory inputs to access the content may be used which will be easy for them to learn.

Mental Illness/ Disorder:

In recent time's mental illness among students at higher education system are on the rise and has come to the notice of professionals and the government aiming at providing suitable support. These students require timely support from psychologists and/or psychiatrists to lead a comfortable life. An alert and understanding faculty will be of significant help to these students. Keeping a watch on the student's behavioral changes and moods by the faculty and referring them for appropriate intervention will help these students significantly. Lecturers may support them by choosing the technology and programmes from the pool of available ones for education. If required, this can be done in consultation with the professional support, so that the choice is appropriate according to the needs of the students.

Physical disability including, loco motor disability, leprosy cured persons, cerebral palsy, dwarfism and Acid attack.

While considering the pedagogical aspects of these disabilities, following accessibility consideration is more important than other pedagogical aspects.

- The classroom should be on ground floor or easily accessible through elevators big enough to fit a moving wheelchair or appropriate ramp
- Scribe (writer) may be made available to the individual with cerebral palsy.
- The need for the scribe may be judged on case-to-case basis with reference to particular function affected.
- Use of support / adapted / advanced / electronic writing / seating material is allowed on case-to-case basis with reference to particular function affected.
- To provide additional time during internal assessment as well as during the term end examination. This may be allowed 20 minutes per hour.
- Allotment of exam centre close to their homes having barrier free access to the building.

Specific Learning Disability

The students with Specific Learning Disabilities (SLD) who don't get the help they need for their studies. They are more likely to struggle with their studies and experience mental health issues, such as stress and anxiety, as a result. In fact, statistics show that students with SLDs have much higher rates of drop out than those without learning difficulties. It's the responsibility of the institution to provide support to SLD students and keep them well informed about the services that are available to them. Broadly pedagogy for specific learning disability in higher education may be classified as;

Curriculum adaptation

- For coursework, students with SLDs may need additional time and extra support from their teachers.
- Rewriting instructional materials in a simplified format.
- Providing summaries, graphic organizers, or outlines of instructional materials.
- Color-coding textbooks to highlight key concepts and new vocabulary.

Guidelines for Credit Based Course on Pedagogical Aspects for Teaching Divyangjans and Specific Learning Disabilities (SLDs)

- Audio taping textbook content.
- More than one method would be ideal to teach PWLD
- Utilizing teacher presentation cues (e.g., gestural, visual, or verbal) to emphasize key points and key concepts to be learned.
- Provide hands-on experiences

Reduced Course Loads: Clearly communicate all deadlines, assignments and expectations well in advance. Ensure ample time between assignments for students to receive feedback. Consider the time required for students to complete assignments, and if required reducing the course work as per the individual needs of SLDs.

Multiple methods of information: Using multiple methods to convey information is one of the best ways to reach as many students as possible and keep them engaged. Make sure all the formats are accessible (for example, using captions, transcripts or alternative text). It's useful to cover core material through a variety of mediums for instance, lectures, textbooks and / or visual presentations.

Remedial Classes: The HEIs shall support the persons with disabilities to cope up with their studies. All the issues pertaining to teaching-learning aspects shall be resolved timely. Remedial classes shall be provided to the persons with disabilities in formats and methods based on their specific needs. However, faculty members may also voluntarily come forward to provide remedial classes. The HEIs shall make a record of the number of persons with learning disabilities opted for the remedial classes after issuance of present guidelines. (Ref: UGC scheme for funding remedial classes may be referred to).

Audio recording of lectures: Consider allowing students to audio-record lectures, or create audio podcasts of lectures and make them available. While these may be especially helpful for students with disabilities and for students whose first language is not English, they could be a useful study aid for everyone.

Managing learning system: Encourage and support different ways for students to interact, the material and one another through hands-on activities, discussions or technology- / internet-based interactions including clickers, or using a learning management system.

Chapter 4 Accessibility and Pedagogy

Accessibility of persons with disabilities in HEIs:

Accessibility for learning disabled people in Higher Education means the process of designing courses and developing a teaching style to meet the needs of people who have a various types of learning disabilities due to varying learning styles. There is no single way to teach, people with learning disability as they learn in a variety of ways; using different instructional methods will help meet the needs of the greatest number of learners. Inclusive practices in education ensure quality education without discrimination to any learner. It fulfills diverse needs in a responsive and supportive manner. Higher education institutions (HEIs) need to create a common learning platform that is flexible and accessible for all the students to learn together including those from varied backgrounds and diverse abilities. Such an inclusive environment benefits not only the learners but also forms a strong foundation of social inclusion and accessible environments as a whole. Thus, it should result in removing barriers by bringing necessary changes to infrastructure, curriculum, teaching-learning process, and all other all components needed for equality, equity, quality and full participation in both academic and social aspects of campus life.

Needless to say, accessibility and inclusion in higher education Institution (HEI) would need to be propagated for students with disability in general and Specific Learning Disability in particular. Broadly accessibility for students with disabilities and specific learning disability in higher education may be as follows:

Physical Environmental accessibility broadly includes the following:

Street infrastructure within HEIs campuses: The HEIs campuses must develop street infrastructure with accessible pedestrian pathways that are at least 1800 mm wide for two-way movement. The pathways should be continuous without breaks and have a firm, level, and non-slip surface and be well lit for use in low light conditions. Level crossings, traffic calming measures at appropriate junctions, accessible bollards, tactile pathways, appropriate seating heights in street furniture and a whole range of elements of mobility infrastructure needs to adhere to various relevant codes including Harmonized Guidelines & Standards for Universal Accessibility in India, 2021 issued by Ministry of Housing and Urban Affairs, Govt. of India.

There should be accessible seating facilities provided along the street in the campus every 30 meters that don't block the pedestrian access facility. Enhancing walk ability and making walkways wheelchair friendly is highly recommended as a priority for all HEIs. Not only this shall promote higher accessibility, but also advances measures for environmental sustainability. It is therefore important that street and mobility infrastructures are well designed, regularly monitored and maintained, audited for accessibility to ensure inclusive mobility for all. Where feasible, mobility alternatives such as cycling and related infrastructure such as bike-sharing systems should also be developed in the HEI campus. Similarly, parking spaces including accessible parking spaces for cars and adapted vehicles

Should be earmarked near all important buildings expecting students and staff with disabilities.

Accessible Drop off and boarding points should be provided on the campus where users can safely board and de-board the public / HEIs transport options near the facilities, units, or departments. Besides above, accessible parking provisions for adapted scooters or other mobility devices of persons with disabilities and creation of reserved car and two-wheeler parking be adopted across all HEIs.

Details of various elements of accessible street infrastructure like kerb, ramps, street furniture, tactile pathways etc.

GPS Mapping or Bluetooth beacon-based technologies may be deployed to enhance orientation/ navigations in the campus while an all centric understanding of the environment is aided by constructing tactile and visual maps and by walking through the environment.

Signage and Way finding: HEIs need to strengthen the infrastructure for accessible information through appropriate way finding systems across the campuses. For better orientation within the campus, accessible signage's informative and directional should be provided. Visual and Tactile Maps should be provided to enhance way finding within the campus and buildings. Electronic and Digital Signage Systems that emit sound and provide a good colour contrast are also increasingly used to enhance accessibility for the diversity of users. Font type size of text, and illumination levels should comply with approved accessibility standards.

Resources, Technology and other support Services accessibility

Learning Aids: The learning process of students with SLDs can be improved drastically with the help of learning aids. For example, students with dyslexia are likely to work better with a laptop as these provide tools such as text-speech software, typing programs, and mind-mapping software for organizing and planning. Much of this software can also be incredibly valuable for other SLDs, such as the use of mind mapping software for those with ADHD. Students with SLDs might also work better with different colour and fonts to other students, and so every effort must be put into adapting learning materials where possible for those who require it.

Make the document accessible: Students use assistive technology to adapt information into a usable format for their learning needs.

- **Screen readers:** These read aloud information on a computer screen, such as written text, or the description of an image provided through alternative text or Alt Text.
- **Screen enhancement software:** allows users to magnify the computer screen or change the contrast to make the content easier to see. Your syllabus will be one of the first contact points that students have with your class.
- **Providing the document in an accessible format:** one that can be read easily and used by an assistive technology such as a screen reader will demonstrate that your course is inclusive.

- **Make the syllabus available electronically** to all students, and update it if there are revisions during the course; this could be done through a learning management system, such as Blackboard, Web CT, Desire2Learn, Moodle or Sakai; by email or on the course website.
- **Use e-mail** or the course website to facilitate the submission and return of assignments.

Mobile Apps for Students with specific learning disabilities:

- **Stay Focused:** Stay Focused is a Google Chrome extension that allows students to block time wasting websites. This software uses task time tracking technology to break tasks into smaller, manageable portions. This can help students avoid social media and other time-wasting sites, boosting productivity.
 - **Web Captioner:** Web Captioner provides real-time captioning, making lectures and events accessible to students who struggle to process speech. The captions appear within seconds, and the software is customizable, allowing students to change their language, font, color, background, and text position.
 - **Ginger:** Powered by artificial intelligence, Ginger is a free writing assistant that provides context-based corrections in real time. Ginger is available both as a Google Chrome extension and as a desktop app. The software can help boost students' creativity and increase writing speed.
 - **Dyslexia Toolbox:** The Dyslexia Toolbox is a Google Chrome extension that facilitates reading for dyslexic students. The software changes website fonts to Open Dyslexic, a font made for students with dyslexia. It also hides portions of pages to allow users to concentrate on specific passages of text.
- 1) **Availability of the Resources:** After the need identification, all the required equipment/services need to be made available at all the units (e.g. library, canteen, photocopying services area, labs, resource centres, parking, etc.). It must be ensured that persons with disabilities should not wait or repeatedly demand the service/resources. The lag time should be minimized or zero.
 - 2) **Integration of E-content:** HEIs shall integrate the various technology-based platforms such as SWAYAM/DIKSHA etc. with teaching-learning considering the diverse needs of the persons with disabilities. Wherever the e-content has been made available or being made available, it shall be provided in different formats accessible to all the persons with learning disabilities.
 - 3) **Library Facilities:** Library services for persons with learning disabilities should also be given due care at libraries and their needs be attended to as per their requirements. The libraries after admitting the students with learning disability at HEIs must assess the needs of such students and provide the services such as content in 'easy to read' or 'plain language', enlarged print, audio material, spoken-word collection, audio & video in daisy format to enhance learning and understanding.

Accessibility of Examination & Evaluation

An accessible examination system contributes to equality, inclusion, participation and engagement among students that leads to students' optimum learning outcome, satisfaction and wellbeing. Providing an accessible assessment is more of a process through anticipating diverse preferences, needs, abilities among students and providing in-built flexibility and anticipatory adjustment. Any modification that is used in the regular classroom that helps the person with a disability, the same should be provided during testing also.

Accessible Assessment and Examination Systems for SLDs:

Students with Specific Learning Disabilities are exempted from writing answers in detail during examination.

- Consider having multiple methods of student evaluation, such as exams, presentations, papers, etc. There may be more than one appropriate way to meet and measure learning objectives.
- Students with dysgraphia are allowed to use writers during examination. Allow reader during examination also.
- Extra Time for Assignments and Tests.
- Providing alternatives for handwriting tasks during examination.
- Provide a separate, distraction-free room for writing tests and/or exams.
- Allow for the use of adaptive technology (for example, screen-readers or screen enhancement software such as screen magnification).
- Exams and assessments are generally designed for those without SLDs, which means that those with a learning difficulty may be at a disadvantage.
- In order to ensure every student is assessed on a level playing field, universities must be flexible with their assessment methods.
- Certain students with SLDs will need more time to complete exams and may require additional assistance in the form of a scribe or a laptop.
- Permitted to use calculators for mathematics calculation during examination.
- Give short answer questions
- Modify format (multiple choice, essay true/ false)
- Allow answers to be dictated

Chapter 5

Pedagogy of Choice Based Credit System (CBCS) and Academic Bank of Credits (ABC) for Students with Disabilities in HEIs

The Choice Based Credit System (CBCS) is an educational model that offers students to opt for courses & subjects of their choice - core, elective, open or global electives & skill-based courses. Unlike the traditional marking-based system, the CBCS grading pattern is based on earned credits every semester.

As per National Education Policy 2020, the Academic Bank of Credits (ABC) has been envisaged to facilitate the academic mobility of students with the freedom to study across the Higher Education Institutions in the country with an appropriate "credit transfer" mechanism from one programme to another, leading to attain a Degree/ Diploma/PG-diploma, etc.

Academic Bank of Credits shall deposit credits awarded by registered institutions into students' accounts. The Academic bank credit(s) can only be shared from institutions, not directly from the student. The credits submitted by an authorized institution will be accepted for storage and validation by the ABC.

Accessibility for ABC: For facilitating Academic Bank of Credits system functional for students with disabilities in HEIs, a number of provisions can made.

1. **Credit Accommodations:** For a particular course requirement, the following criteria may be used for assigning credits:

- Self study
- E-learning
- Lab work
- Online Accommodations
- Home Based Training
- Hands-on-Experiences
- Project Learning
- Short-term course
- Engagement in internship
- Flexibility in delivery course

2. **Alternative Courses:** Persons with disability may be allowed to go for continuing and earning credits by making use of one or more alternate courses at one time.

3. **Modification:** The students with disabilities need multiple modes of representation, action and expressions. Modifications may be done in transaction, teaching learning material and evaluations.

4. **Additional Measures for Evaluations:** In credit based system the mode of evaluation may be considered as per the unique need of students with disabilities to earn the credit by using the following.

Guidelines for Credit Based Course on Pedagogical Aspects for Teaching Divyangjans and Specific Learning Disabilities (SLDs)

- Additional Test
- Additional Assignments
- Additional Projects
- Multi stage evaluation
